Art Unit: 1618

Claims 23-40 are presented for examination.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 23-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 02/064083 in view of Fraley et al. (U.S. Patent 6,479,512).

Art Unit: 1618

WO Patent teaches the use of S (-) 3-amino-thalidomide and R (+) 3-amino thalidomide for the treatment of macular degeneration. See the abstract, page 13 lines 5-15 and page 15, lines 1-10. The dosages are taught on page 18, lines 10-19. The pharmaceutical acceptable forms are taught on page 19, lines 5-10. The above reference differs from the claimed invention in the use of the racemic mixture of some of the claims and the addition of secondary active agent. Fraley et al. teach the use of the secondary active ingredients as angiogenesis inhibitors, being used for the treatment of macular degeneration. See column 10, lines 12-20 and lines 36-47. It would have been obvious to a person skilled in the art to use the racemic mixture for the treatment of macular degeneration, considering that the prior art teaches the use of individual enantiomers for the treatment of such disorder. It would have also been obvious to a person skilled in the art to add the secondary active ingredients to the compounds of the present invention, based on the teachings of Fraley et al. reference, which teaches the use of the secondary compounds having angiogenesis inhibitory activity in compositions for the treatment of macular degeneration.

One skilled in the art would have been motivated to combine the teachings of the above references, since they in combination relate to the use of primary and secondary claimed components for the treatment of macular degeneration. The determination of the time and interval of administration is considered to be within the skill of the artisan in the absence of evidence to the contrary. Applicant has presented no evidence to establish the unexpected or unobvious nature of the claimed invention, and as such, claims 23-40 are properly rejected under 35 U.S.C. 103.
